Introducing the PBR XLR 16F DSub

The PBR XLR 16F DSub is a 16-point female XLR/DB25 patchbay, suitable for the most robust routing imaginable in a single rack space. You'll minimize the cable chaos when connecting up to 16 mics to your mixer, interface, or outboard hardware... no more throwing your back out or bonking your head on the underside of your desk trying to access hard-to-reach inputs.

Its 16 audiophile-grade, gold-plated XLR connections ensure maximum signal conductivity and signal clarity. The two rear-mounted DB25 connections are ideal for connecting to your mixer or interface, and are securely mounted to an internal steel backplate to prevent wear from frequent reconnections.

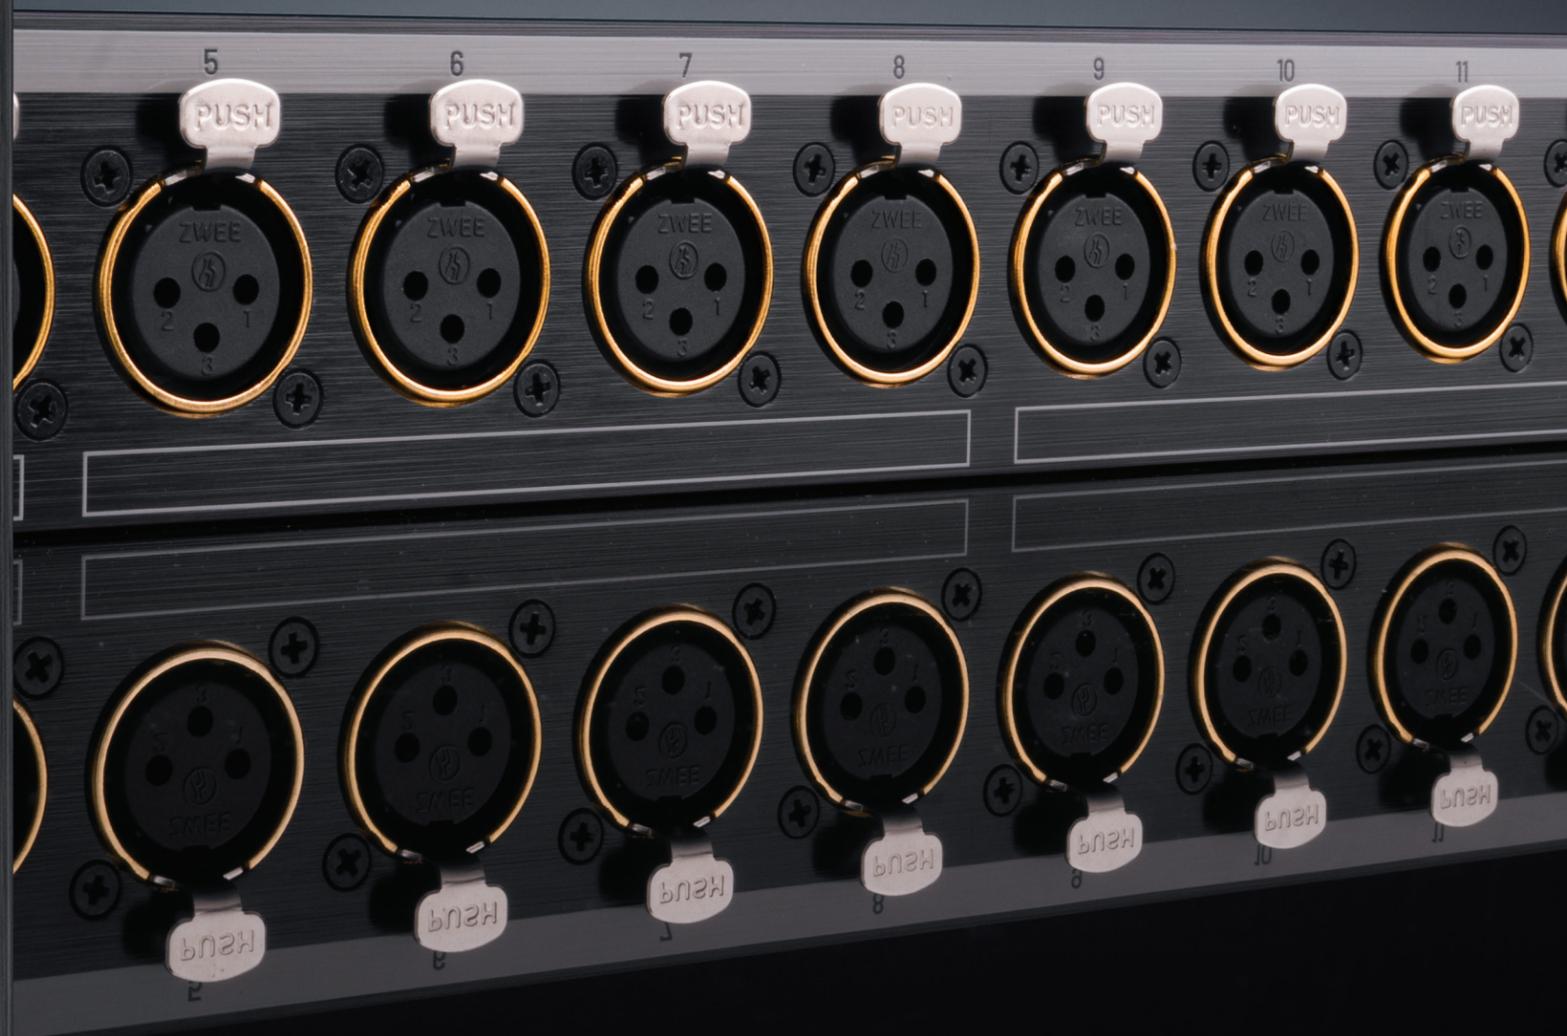

Custom patch labels are included, and also available at blacklionaudio.com or from our partners at PatchCAD. Visit us at www.blacklionaudio.com to learn more.

Studio grade connectivity.

Your studio needs more than just accessible patching – exceptional audio quality through the entire signal path is crucial! Black Lion has been improving already-great gear through our modification service for years, and we channeled all that know-how straight into the PBR XLR 16F DSub.

Black Lion's team of engineers have worked tirelessly to ensure that the PBR XLR 16F DSub delivers proper quality through-and-through. It's built Black Lion-tough, with a reinforced steel chassis and black-anodized aluminum faceplates that make for a matched and sophisticated look.
